

Patent Pending

New Product Announcement

Quality Cable & Electronics Inc, has developed and is now marketing an Agile Modulator (dual IF Loop) with an onboard video display .

This modulator has a small color monitor in the face plate. This new technology allows you to build a headend where every channel can be viewed directly on the modulator. Just look at each modulator and see what each channel is broadcasting. For example, a novice operator at a sports bar, can see what will be broadcast on every TV SET.

This is an agile 860 MHz dual IF LOOP Modulator priced lower than any comparable modulator, PLUS it has an on board video display.
